Detailed Error Report

1. Missing Indentation After `if` Statement

Original Problem:

```
if a + b > c and b + c > a and a + c > b:
if a == b == c:
```

Python requires indentation after an `if` statement. The second `if` must be inside the first one with proper spacing.

Fix:

Indented the nested condition properly:r

```
if a + b > c and b + c > a and a + c > b:
   if a == b == c:
```

2. Missing Colon After `else`

Original Problem:

```
else
print("Not a valid triangle")
```

Python requires a colon `:` after `else`.

Fix:

```
else:
   print("Not a valid triangle")
```

3. Missing Closing Parenthesis in `print`

Original Problem:

```
print("Perimeter:", perimeter
```

The closing `)` was missing.

Fix:

```
print("Perimeter:", perimeter)
```

4. Indentation Missing in Multiple Places

Several `print()` statements were not indented under their respective `if` or `else` blocks. Python strictly depends on indentation to define code blocks. Without correct indentation, it throws:

`IndentationError: expected an indented block`

#Fix:

Properly indented all block statements under:

- **`if`**
- **`elif`**
- **`else`**
